Weekly Webinar Schedule

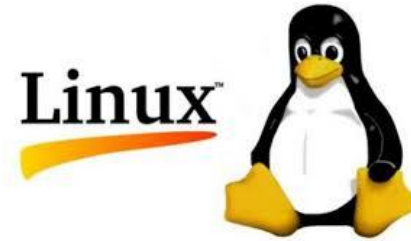

Module Overview(Tentative):

- Number bases used in Computer Science
- Boolean logic
- Computer system architecture
- Operating systems: Components, services, and utilities
- Memory and file management
- Scripting and shell programming
- Virtualisation and hypervisors
- Internet protocol suite
- Physical/network addressing
- Transport layer protocols
- Application layer protocols
- Wireless network protocols: LAN and PAN

Development Tech (tentative)

```
#!/bin/bash
# This is a basic bash script.
a=Hello
b="Good Morning"
c=16

echo $a
echo $b
echo $c
```

What is Cisco Network Academy?

Empowering educators with a next-gen teaching experience

Cisco Networking Academy is a global IT and cybersecurity education program that provides:

- best-in-class courses,
- tools, and
- resources

to help people from all backgrounds participate in the digital economy.

Global Impact Report

Educating the learners who connect the world

Netacad Students Around the World:

In-Kind Contributions

\$5.25B USD

since inception, in curriculum, tools, resources, and support to students, schools and instructors

95%

students who took Cisco certification-aligned courses obtained a job and/or educational opportunity based on surveys since fiscal 2005 through fiscal 2023

Students

3,735,000

current annual students

20,496,000

total students since inception

27%

are female since inception
based on those who identified gender

Instructors

29,700

active instructors

22%

are female
based on those who identified gender

Cisco Academies

11,700

institutions and organizations offering
Networking Academy courses

2024

- 4.7 million current annual learners
- 12,100 institutions and organizations offering courses in **191** countries.

Jobs Market for Networking and Cyber Security Graduates

By 2025, automation and a new division of labor
between humans and machines will disrupt

85 million jobs

globally in medium and large businesses across 15
industries and 26 economies.

97 million new jobs

will be created by 2025 due to AI.

18 LABS INSTRUCTOR-LED

Using Linux

- ❖ You can use [WSL](#) (windows subsystem for linux)

- ❖ If using a Mac, the standard Mac terminal will be perfect

NOTE: If you use the mac terminal then you are working and making changes to your actual OS

You could use any emulator/any virtualiser software & then install Linux on top of this

(= keeps your Linux completely separate from your work system)

- ❖ You could install [VirtualBox](#) & then install **Lubuntu** onto this

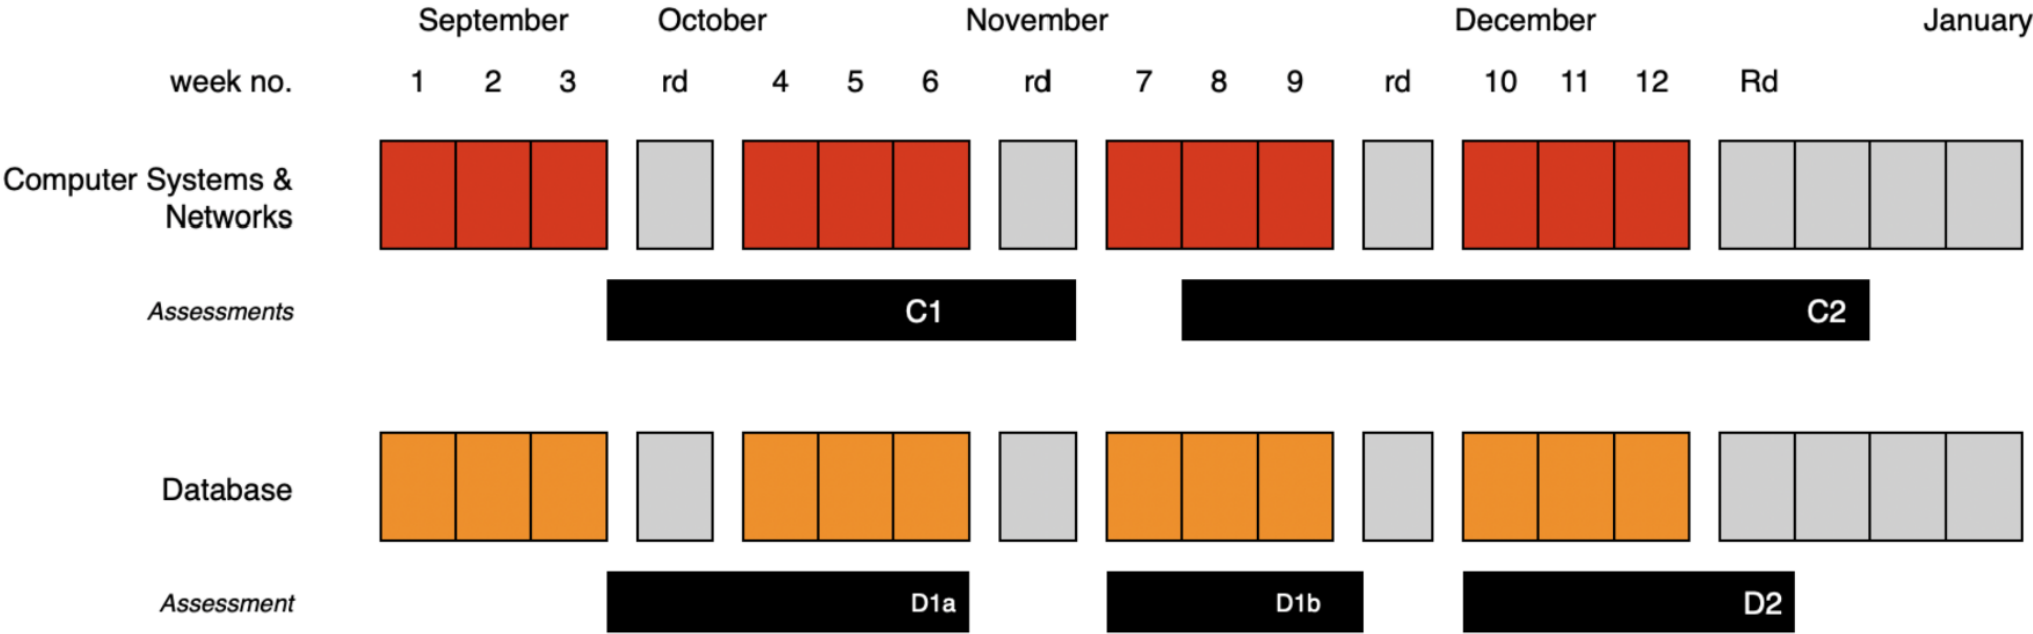

VirtualBox also won't install on a M1/M2 chip as they removed support for it

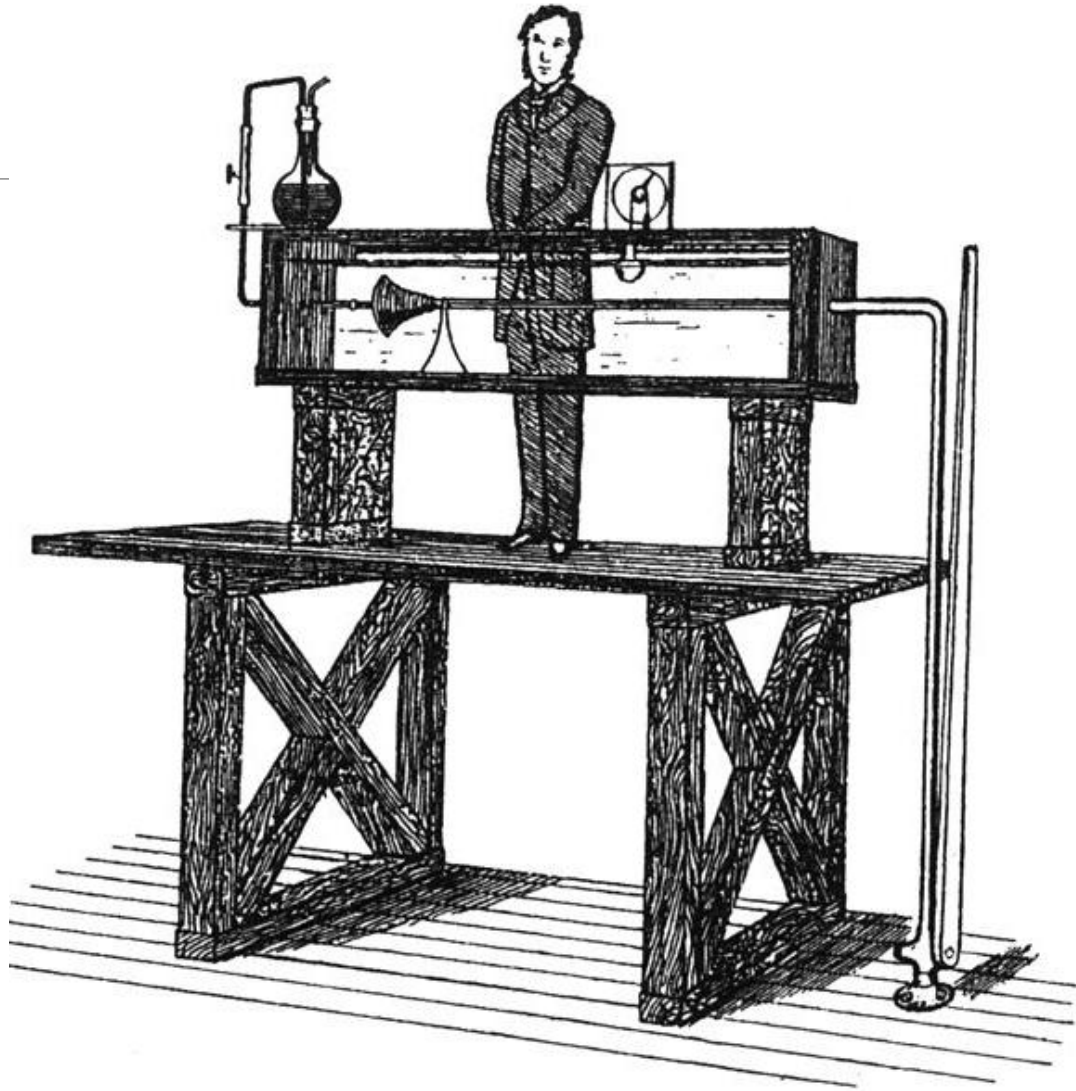

- ❖ You can use a UTM virtualiser (was created for macOS & only for Apple platforms)

- ❖ You can install Lubuntu on a Raspberry Pi (the SD card will hold everything)

Many of screenshots in the notes will be taken off my own Lubuntu that I've installed in VirtualBox

Semester 2 Assessment Schedule

Ethos

Focus on practical skills

Good idea to stay current with module:

- Some lectures will require reading/viewing of talks before.

Experiment/build something interesting:

- You will have the opportunity to propose your own assignment!

Just please have your linux
system of choice ready to
start for classes 19th Jan

It's your choice

Which
will you
use?

Allow yourself
to be a beginner.
No one starts off
being excellent.
